

Where dreams come true!

Gestational surrogacy program in Guatemala.

Program Introduction

Thank you for your interest in our Eternal Spring Program (ESP). Our gestational surrogacy program takes place in Guatemala City, Guatemala. We have organized all professional services needed for you to create family in one place. We serve clients from many nationalities and most embassies are located in Guatemala City. We have cost and legal advantage than many popular surrogacy venues. We do not discriminate on age, being single, and LGBT welcome here.

We use our own staff and professional collaborators such as fertility physicians, psychologists, and lawyers. Our standard surrogacy packages include everything; lawyers, IVF clinics, GC, her expenses, egg donor, testing laboratories, hospital, transportation and translation, passport fees, birth certificate fees, etc., Our clinics do accept shipments of gametes or embryos from most global locations. Gender selection of embryos is permitted.

We have egg donors and GCs ready all the time, so there are no waiting lists

Eight General Features We Do

- 1) We introduce you to one or more GCs
- 2) We support and manage your GC throughout the journey.
- 3) We will endeavor to make the journey as smooth and pleasant as possible.
- 4) We provide *in vitro* fertilization (IVF) and additional fertility work through our associate IVF clinics.
- 5) We will present our local "beautiful" egg donors.
- 6) We provide all legal contracts and lawyers for your contract with GC.
- 7) We provide and legally manage the change in GCs parental rights.
- 8) We assist you with baby's papers such as birth certificate, passports and legal documentation for support. All the procedures done in Guatemala (legal evidence and clinical certifications of all the procedures) are translated into English.

How We Screen Egg Donors And GCs

Our process to screen egg donors and GCs is the same used by any professional and experienced organization. All of our GCs have to be mothers with uncomplicated pregnancies and birth. Our physicians complete a medical record review as a first step. The GCs are tested for any infectious diseases and drugs. They also undergo a physical exam with focus on reproductive health. A psychologist will conduct an evaluation of the GC candidate. All of our GCs come to our program through past GCs. These women are usually relatives or friends of current or past GCs. This allows us to reduce risk of undesirable social behavior.

Where dreams come true!

Gestational surrogacy program in Guatemala.

Egg donors undergo similar evaluation as the GCs, but do not have to be mothers. A deeper history of family health is collected on egg donors.

Our most popular offering includes a local egg donor, PGT-A testing and up to three embryo transfers. We do offer free consultations with a doctor and family law lawyer throughout your journey.
